

POLYTAN SERVICE: THE PARTNER AT YOUR SIDE

By choosing Polytan, you receive high-quality, professionally installed sports surfaces that are precisely matched to your needs. In addition, you are provided with the security of always having a competent partner at your side. As a full-range supplier we not only offer accessories, such as goals, long jump bars or basketball hoops to complete your venue. We also have specialised machines that we have developed ourselves for efficiently cleaning, servicing and repairing our synthetic turf systems and synthetic surfaces, thus ensuring a consistently high quality of use and ideally retaining the value of your Polytan sports surface.

We can also help you with project planning right from the start. Whether you require assistance with the creation of CAD plans, such as e.g. marking plans, or detailed technical drawings – we are there for you.

CLEANING AND MAINTENANCE

CLEANING AND MAINTENANCE

Polytan sports surfaces are designed to retain full functionality, even after many years of intensive use. Over a long period of time, dirt, dust, pollen, environmental and weather influences, such as rain, snow or strong sunlight, however, take their toll on even the thickest surface. That is why we recommend that your Polytan sports surfaces are professionally cleaned at regular intervals. As your service partner, Polytan provides expert personnel, special equipment and guidance to help you with this task. The maintenance services are subject to RAL quality controls and are certified in accordance with RAL GZ 943 and RAL GZ 944. We offer training programmes and special cleaning equipment and quickly carry out expert repairs when needed. We will also be happy to arrange a maintenance and service agreement with you.

The right care for synthetic turfs

Routine visual inspections and the immediate removal of surface dirt or other impurities are among the duties of any groundsman. When it comes to regular care, Polytan recommends the Polytan ACS unit to its customers, which is used for brushing the synthetic turf and for levelling and loosening the infill. We offer a variety of wet and dry cleaning services performed by our qualified experts for an intensive deep clean.

The right care for synthetic surfaces

Running tracks and multifunctional surfaces also become contaminated over time as a result of various environmental factors, with the surface becoming weather-beaten, mossy or encrusted, for example. A high-pressure wet cleaner can be used to remove these impurities from the surface and restore it to a fully functioning sports track.

REPAIRS

We are also your competent partner to rectify various damages – whether it's age-related wear and tear, improper use or vandalism. Depending on the nature and extent of the damage, a team of Polytan repair specialists is on hand ready to get your sports surface looking good and functioning properly in next to no time at all.

ACCESSORIES

In addition to an entire range of maintenance and service equipment, we also offer a large selection of sports equipment and accessories. Upon request, we will be happy to send you our separate catalogue.

REPAIR / MAINTENANCE / SERVICE

OUR SERVICES AT A GLANCE:

Project support

- Creation of CAD plans and technical drawings
- Measurement and line marking

Repairs to synthetic turf

- Replacement of stress impact points
- Replacement of lines/new line markings
