

WATER-PERMEABLE

PolyPlay SE

SINGLE-LAYER MULTIFUNCTIONAL ABILITY WITH A SMOOTH SURFACE

Like its sister product the PolyPlay S, the PolyPlay SE is a durable, all-round surface primarily used on playing fields and facilities for ball sports and leisure activities. Its smooth surface and good ball bouncing response make it the ideal surface for ball sports in schools and a variety of outdoor facilities.

BENEFITS

- Durable multi-function surface
- Optimum ball bouncing behaviour due to its smooth surface
- Low-maintenance and year-round use

WATER-PERMEABLE

PolyPlay SE

MULTIPURPOSE / SCHOOL SPORTS

Unlike the PolyPlay S, the PolyPlay SE is a single-layer surface. The PolyPlay S is water-permeable so that the surface dries out very quickly and is still slip-resistant. This means that the synthetic surface is suitable for year-round use as an all-weather pitch. Additional advantages include the high level of wear resistance and low maintenance costs. The PolyPlay SE is laid as a granulated surface and its single-layer construction means it has even greater durability than the S surface.

AREAS OF USE

- Multi-purpose facilities
- School sports facilities
- Jogging trails
- Senior citizens' homes
- Rehab facilities

PROPERTIES

- Granulated, dual-layer surface
- Bound granules, flat-laid
- Water-permeable
