

REKORTAN AND SPURTAN RE-TOPPING SYSTEMS

Polytan offers a professional solution for worn running tracks in need of renewal. With the product types Rekortan MRT and Spurtan WS RT, old surfaces can be physically and visually renewed to provide optimum training and competition conditions once more.

BENEFITS

- Professional physical and visual upgrade of the sports surface
- Minimal installation time
- Reduced costs – no asphalt work, no disposal of the old surface
- Independent of the manufacturer of the existing old surface
- IAAF certification ensuring suitability for competitions is possible

OLD RUNNING TRACKS GIVEN THEIR SPLENDOUR BACK!

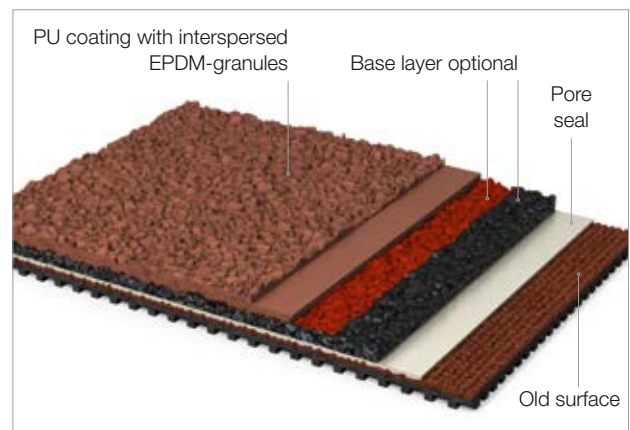

Rekortan M RT

Spurtan WS RT

Water-permeable surfaces as well as water-impermeable surfaces can be provided thanks to the Re-Topping-Systems. Re-Topping-Systems are a very economical solution for refurbishing athletics tracks and sports facilities as the existing elastic substructures can be used again, meaning they are used over the long term and do not need to be disposed of. As a result, installation on the old surface is independent of the design of the initial installation, whether for in-situ surfaces or prefabricated track products. All re-topping surfaces have structured surfaces and are suitable for spikes, offering the optimal subsurface for professional applications. Re-Topping-Systems are frequently installed prior to IAAF competitions and are certified according to IAAF requirements.

REKORTAN M RT

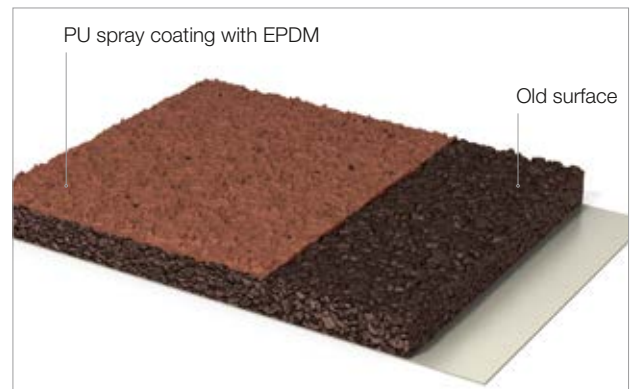

AREAS OF APPLICATION

- Athletics stadiums
- Competitive running tracks
- School sports facilities

REKORTAN M RT

- Pour-coated re-topping for surfaces poured in-situ and granulated surfaces
- Granules with interspersed visible tips, ideally suited to spikes
- Waterproof
- Can be certified according to IAAF requirements

SPURTAN WS RT

POLYTAN WS RT

- Structure-coated re-topping
- Rubber granules, elastomer, spray-coated
- Water-permeable
- Can be certified according to IAAF requirements
