

WATER-PERMEABLE

Spartan SES/Spartan SL

★★★★★

THE ALL-ROUNDER FOR BUSY SPORTS FACILITIES

Spartan SES and SL are water-permeable, structured surfaces for professional athletics training facilities.

BENEFITS

- Quick and easy installation
- Long lifetime
- Structural spray-coating using high-quality raw materials

WATER-PERMEABLE

Spartan SES/Spartan SL

COMPETITION/STADIUM ■ TRAINING ■ MULTIPURPOSE/SCHOOL SPORTS

In the SES system, the base layer is designed using coloured EDPM so that it matches the colour scheme for the structure coating. The surface is primarily used for running tracks, run-up tracks and athletics facilities. In contrast, Spartan SL is a triple layer surface where the middle layer matches the colour of the structure coating. It is primarily used for stress zones on running and run-up tracks and athletics facilities. The high-quality raw materials and system construction used in both synthetic surfaces guarantee a long-lasting, visually-appealing surface. The surface is very quick and easy to install.

AREAS OF USE

- Athletics stadiums
- Competitive running tracks
- School sports facilities
- Multi-purpose facilities

PROPERTIES

- Structural spray-coated surface
- Rubber granules and elastomer compound, sprayed
- SES: Colour-coordinated base layer
- SL: Colour-coordinated middle layer
- Water-permeable
