

WATER-PERMEABLE

Spartan WSS

THE ALL-ROUNDER FOR PROFESSIONAL REQUIREMENTS

The water-permeable surface for professional requirements. If the construction of a waterproof surface within a stadium or training facility is prevented by local conditions or other circumstances, the WSS surface is the ideal compromise.

BENEFITS

- Increased material thickness ensures high durability
- Water-permeable running track for professional training
- Structure-coated from top-quality raw materials

WATER-PERMEABLE

Spurtan WSS

COMPETITION/STADIUM ■ TRAINING ■ MULTIPURPOSE/SCHOOL SPORTS

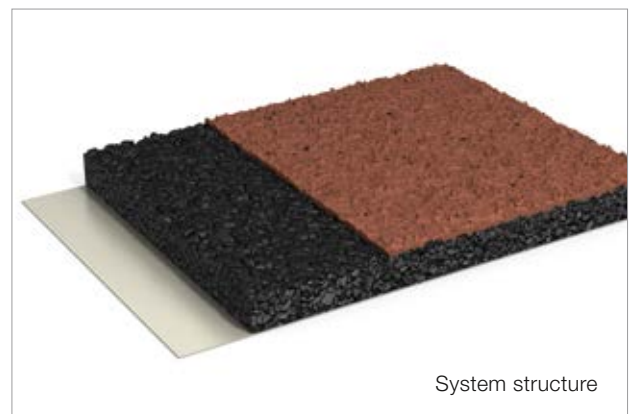

The Spurtan WSS offers a structured surface which is indispensable for professional athletes during training. The water-permeable structure allows surface water to drain off not just via the surface of the running track but also vertically. The high-quality raw materials and bonding agents as well as the increased thickness of the coating ensure a long lifespan and a high level of durability. Excellent shock-absorption and deformation values complete this system.

AREAS OF USE

- Athletics stadiums
- Competitive running tracks
- School sports facilities
- Multipurpose facilities

PROPERTIES

- Structure-coated surface with thick top layer
- Rubber granules, elastomer, spray-coated
- Water-permeable
