Textured filaments

LIGAGRASS PRO R

FOOTBALL, HOCKEY, MULTISPORT

Supported by Polytan's unique ENTANGLEMENT technology, the triangular cross-section of the LigaGrass Pro R filament ensures superior fibre stability while giving the turf more volume and structure. Thanks to post-consumer recycled material, the turf also fulfils modern sustainability requirements. As a result, LigaGrass Pro R is certified in accordance with the ISCC's mass balance approach (ISCC Plus). The environmentally friendly properties of LigaGrass Pro R are accentuated by the BiColour design of the crimped filaments, which creates an extremely natural appearance in lush green.

The integrated CoolPlus function limits overheating of the turf and is extremely effective thanks to the large surface area for reflecting heat radiation. LigaGrass Pro R is available with a mixture of sand and performance infill, or purely with sand infill. It is suitable for multi-functional use in a wide variety of sports, making it ideal for communal facilities. As a robust, low-maintenance turf, LigaGrass Pro R retains its high-quality appearance even after prolonged use. It has been tested in accordance with all major domestic and international standards and is certified with the RAL Quality Mark.

LIGAGRASS PRO R

PROPERTIES

- Green Technology Inside: Filaments made from recycled raw materials
- Exclusive Polytan PreciTex texturing technology
- Monofilament turf fibres with approx. 255 µm fibre thickness
- Exclusive Polytan 100 % PE formulation
- Innovative Polytan ENTANGLEMENT technology
- BiColour design
- 100 % PolyCoat PU wear coat

AREAS OF USE

- Training facilities
- Amateur clubs
- Mini playing fields
- Multisport facilities
- Communal and school sports facilities

We act sustainably – from the development and selection of our raw materials to the production, installation, maintenance, and recycling of our sports surfaces. Our products are designed with durability and efficient manufacturing in mind, using ecological materials and reliable processes.
