WE MAKE SPORT.

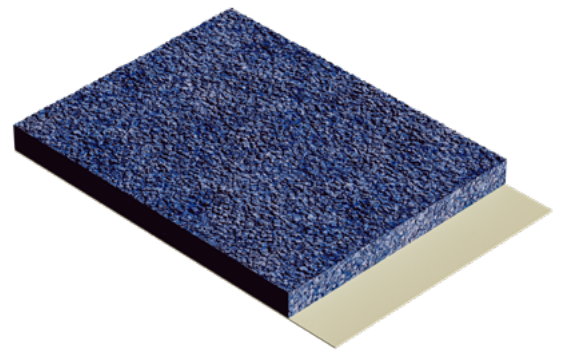

Water permeable

POLYPLAY SE

MULTISPORT

Just like the closely related PolyPlay S, the PolyPlay SE is a durable, all-round surface that lends itself best for use on playing fields and facilities for ball sports and leisure activities. Its smooth surface and good ball-playing properties make it an ideal surface for ball sports in schools, as well as for a variety of outdoor activities.

Unlike PolyPlay S, PolyPlay SE is a single-layer surface. Its water-permeability helps the surface dry quickly while also making it slip-resistant. The artificial surface can therefore be used year-round in all kinds of weather. Another benefit of the low-maintenance surface is its high wear resistance. The PolyPlay SE is installed as a granulated surface and, because of its single-surface construction method, is more durable than the PolyPlay S.

POLYPLAY SE

PROPERTIES

- Granulated, single-layer surface
- Bound granules, flat-laid
- Water permeable

AREAS OF USE

- Multi-purpose facilities
- School sports facilities
- Jogging trails
- Facilities for the elderly
- Rehab facilities
