Surface sealer

POLYSEAL

ATHLETICS, MULTISPORT, FALL PROTECTION

Surfaces can become damaged by daily use, and especially by the improper use of running tracks and sports surfaces – such as concerts and events. Continued use can lead to granules in damaged areas breaking loose from the surface. With our PolySeal surface sealer, we offer a way to effectively protect running tracks and sports surfaces. PolySeal does not affect the original synthetic properties of the surface, allowing it to retain its original quality.

The sealer is a low-viscosity, abrasion-resistant PU coating. It is sprayed or rolled onto the existing synthetic surface, so even structured surfaces do not pose a problem. As well as providing increased abrasion-resistance, Polytan PolySeal reduces the amount of dirt that accumulates on the synthetic surface and makes it easier to clean. Added UV protection helps enhance the appearance of the running track. The sealant can either be applied directly to newly installed surfaces or applied later to existing surfaces.

PROPERTIES

- Does not affect original surface properties
- Suitable for spikes
- Prevents granules from breaking loose
- Protects against UV bleaching of colour pigments
- Dirt-repellent

AREAS OF USE

- Poured surfaces
- Structural spray-coated surfaces
- Granulated surfaces
